

# Plan, procure & operate SMB networks — end to end.

An AI-native platform that turns business requirements into a working network — from sizing and BOM to topology, ordering, deployment and live monitoring.

# SMB networks are still planned in spreadsheets.

Most small and mid-sized businesses still rely on consultants, MSPs, or trial-and-error to design their office network. The result is slow procurement, mismatched gear, and operational blind spots after deployment.

**73%**

of SMBs delay network upgrades because they don't know what to buy

**6 wks**

average lead time from initial quote to a deployed, working network

**62%**

of SMB IT budgets get spent on hardware that's over- or under-sized

# One platform. Four guided steps.

From a 5-minute business intake to a live network you can monitor — Secure AI Office automates every link in the chain.

01

## Business Intake

Capture industry, headcount, sites, security needs in 5 minutes.

02

## AI Sizing

Deterministic formulas + AI advisor recommend AP, switch & router counts.

03

## BOM + Diagram

Auto-generated bill of materials and customer-friendly topology.

04

## Order & Monitor

One-click cart, vendor fulfillment, and Zabbix-powered live monitoring.

# What the customer actually sees.

1

## Guided intake

Smart forms with industry presets and conditional questions.

2

## Live BOM table

Vendor-linked SKUs with real prices and one-click add-to-cart.

3

## Topology preview

Drawio-rendered diagram so non-technical buyers can sign off.

4

## Cart → quote → order

Same workflow procurement teams already understand.

5

## Post-deploy ops

Zabbix dashboards stitched directly into the customer portal.

### Network Design Builder

Auto-generated for Acme Dental — 2 sites, 24 staff

|                 |          |           |
|-----------------|----------|-----------|
| ESTIMATED CAPEX | AP COUNT | BOM LINES |
| <b>\$8,420</b>  | <b>6</b> | <b>14</b> |

#### Bill of Materials

|            |       |                |
|------------|-------|----------------|
| UAP-AC-PRO | Qty 6 | <b>\$1,194</b> |
| USW-24-POE | Qty 1 | <b>\$679</b>   |

+ 12 more items

**Add all to cart**

# Customers go from blank page to BOM.

Marketing landing leads into an AI-assisted intake. Five minutes of answers becomes a sized network design.

# After the sale, the platform earns its keep.

A live customer dashboard tracks orders and recurring spend. Managed services flow into the same cart so every device can become a subscription.

## CUSTOMER DASHBOARD

Recurring revenue, orders, active subs and recent designs at a glance.

## MANAGED SERVICES + CART

Per-device managed pricing rolls into the same checkout flow.

# Six pillars, one workflow.

## Business Intake

Industry templates, conditional logic and security profiles built in.

## Deterministic Sizing

Formulas (not vibes) translate headcount + sq ft into AP/switch counts.

## BOM Generator

Catalog-linked SKUs from real vendors with live pricing.

## Topology Diagrams

Drawio export so customers can review and approve visually.

## Vendor Marketplace

Multi-vendor catalog (CellHub) — sell, fulfill, manage commissions.

## Live Monitoring

Zabbix-powered health dashboards stitched into the customer portal.

# Not a chatbot bolted on.

## AI runs the whole pipeline.

Every step from intake to operations is enriched by purpose-built AI: a live consultant avatar, a contextual chatbot, automatic topology synthesis, and intelligent catalog matching against thousands of SKUs.

### Anam Avatar

Live AI consultant walks customers through intake and trade-offs.

### Contextual Chatbot

Answers product, pricing and topology questions in-page.

### Topology Synthesis

AI assembles a Drawio diagram from raw BOM data.

### Catalog Matching

Embeddings map fuzzy requirements to real vendor SKUs.

# Customers design with AI, not against it.

An AI Assistant rides along through every step — interpreting answers, suggesting hardware, generating diagrams, and explaining trade-offs in plain English.

The screenshot shows a web form titled "Business Network Intake" with a subtitle "Tell us about your business environment and we will generate your full network design." The form is divided into two main sections: "1. Business Profile (Basic Context)" and "2. Connectivity Requirements".

**1. Business Profile (Basic Context)**

- Business type / industry: Select (dropdown menu)
- Number of locations: [text input]
- Square footage of location: [text input]
- Number of employees: [text input]
- Peak number of customers: [text input]
- Average daily customers: [text input]

**2. Connectivity Requirements**

- Internet type: Fiber (dropdown menu)
- Primary internet speed (optional): 1 Gbps (text input)
- Guest Wi-Fi required?: Yes (dropdown menu)
- Desktop computers: 6 (text input)
- Mobile phones: 20 (text input)
- Handheld POS devices: 4 (text input)

An "AI Assistant" overlay is visible in the bottom left corner of the form. It features a play button icon and the text "Start AI Assistant". Below this, it says "Click the play button above to start. I'll help you fill out the form." and "Click to start your AI assistant". At the bottom of the overlay, it says "Connect first" with a small icon.

*Live AI Assistant in production today*

1

## Answer in plain English

Customer types or speaks their requirements. AI fills the structured form behind the scenes.

2

## AI sizes the network

Recommends AP, switch, router and security counts based on industry, headcount, square footage.

3

## AI builds the topology

Generates a Drawio network diagram from the BOM — placement, links, labels, all auto-laid-out.

4

## AI explains and adjusts

Customer can ask 'why this AP model?' or 'what if I add a second site?' and AI revises live.

# Built for the long tail.

33.2M

## U.S. small businesses

Each one needs a network. Almost none of them have a dedicated network engineer.

### Wedge: under-served office segments

Where a deterministic builder + AI consultant beats hiring an MSP.

# Three ways we make money.

A SaaS subscription gets businesses planning. A marketplace fee captures procurement. Managed services lock in long-term recurring revenue.

## STARTER

# Free

Self-serve

- Business intake
- BOM preview
- Single design
- Community support

## MOST POPULAR

## PRO

# \$79

per office, per month

**v1.0**

Shipped Q1 2026 — full intake → BOM → diagram → cart

**120+**

Pilot offices currently designed in the system

**9**

Vendors active in the marketplace catalog

## 12-month roadmap

Q2 '26

**Vendor onboarding flow**

Self-serve vendor portal + commission engine

Q3 '26

**Live ops monitoring**

Zabbix integration generally available

Q4 '26

**Multi-tenant orgs**

MSPs manage multiple customers from one console

Q1 '27

**AI deployment runbook**

Auto-generate install scripts and configs from BOM

# Faster than an MSP, smarter than DIY.

## vs. Traditional MSP

We deliver a finished BOM in minutes, not weeks. Customers stay in control instead of waiting for an account manager.

## vs. DIY (spreadsheets + reseller)

Deterministic sizing prevents over-/under-buying. Customers don't need to learn networking jargon.

## vs. Vendor configurators

We're vendor-agnostic. Best-fit hardware from a multi-vendor catalog, not whatever the rep is selling.

## vs. Generic AI chatbots

We close the loop — AI doesn't just suggest, it generates a real BOM, real diagram and a real order.

# Operators who have shipped this before.

**Muskan**

**AI Engineer & Co-Founder**

Leads the AI pipeline — intake, sizing, topology synthesis. Previously AI engineer at Sensitek.

**Co-founder**

**Engineering**

Full-stack platform, vendor marketplace and Zabbix monitoring integration.

**Advisor**

**Product & GTM**

Two-time SMB SaaS founder. Brings playbook for vendor onboarding and channel sales.
